EXPERIENCE

Full-Stack Developer

Growmate · consultant at IRN

06/2025 – Present | Lisbon, Portugal (Hybrid)

- Own the payment flows end to end; engineered fraud-prevention and value-reconciliation safeguards that catch misaligned amounts before they reach customers, coordinating across teams to resolve discrepancies.
- Resolved 100+ urgent/critical issues across authentication, payments, accessibility and UI/UX via root-cause analysis of C#/.NET services and React front ends.
- Designed a modular, multi-step form-rendering engine in React 18/19 + Next.js for complex enterprise workflows.
- Integrated Keycloak (OAuth 2.0 / OIDC) with Portugal's Chave Móvel Digital (CMD) government identity, plus a payment-provider integration.
- Built secure REST APIs with Kafka event streaming and Redis caching on a C#/.NET back end.
- Helped modernise delivery — moved the app from Docker to Kubernetes with Jenkins CI/CD for repeatable deployments; Jest tests, Agile/Scrum; mentor interns and juniors.

Full-Stack Developer

Neotalent · consultant at VORTAL · Operations Team II

05/2024 – 06/2025 | Lisbon, Portugal (Hybrid)

- On Operations Team II (escalation tier fixing the real underlying defects, not first-line unblocking), diagnosed, resolved and tested complex production incidents across C#/ASP.NET services and React front ends.
- Delivered full-stack features from SQL Server data access to the React UI on an enterprise e-tendering platform.
- Built and optimised Azure DevOps CI/CD; refactored legacy modules for performance and maintainability.

Back-End Developer

VIA Consulting · Millennium BCP, ActivoBanco, Ageas, SIBS

01/2023 – 05/2024 | Lisbon, Portugal (Remote)

- Single-handedly rescued a stalled, non-functional project — rebuilt the C#/Java service layer linking Millennium BCP and Ageas (REST + SOAP) and delivered it to production, restoring a blocked banking–insurance pipeline.
- Built and shipped online pet insurance end to end for Millennium BCP — a product the bank lacked — integrating it into the existing MBCP mobile app architecture, now live for customers.
- Automated financial-file processing with Rundeck jobs; wrote NUnit tests; delivered via Git, SVN and Azure DevOps CI/CD.

Front-End Developer, Intern

Emvenci Business Services

03/2022 – 08/2022 | Lisbon, Portugal

- Modernised a legacy UI into a new Angular design system (Atomic Design); TypeScript, SCSS, AWS, Git + CI/CD.

Software Developer, Intern

Arquiconsult

03/2020 – 08/2020 | Lisbon, Portugal

- Built a C#/ASP.NET Core back-office (Entity Framework, Razor Pages), Xamarin-facing APIs and a Google Maps integration.

SUMMARY

Full-stack developer with 4+ years shipping scalable web apps for banking, public-sector and enterprise clients. React, Next.js, Angular and TypeScript on the front end; C#/.NET, ASP.NET Core and Node.js with REST/SOAP APIs and SQL Server on the back end. Owns payment and fraud-prevention flows, took a stalled banking integration to production, and mentors junior developers.

EDUCATION

CTeSP — Web & Mobile Application Development

ISTEC, Lisbon · 2020 – 2022

Technician in Management & Programming (EQF 4, 15/20)

INETE, Lisbon · 2017 – 2020
