SUMMARY

Full-Stack Software Developer (React and .NET) with 4+ years building scalable web applications for banking, fintech, public-sector and enterprise clients. Front end in React, Next.js, Angular and TypeScript; back end in C#/.NET, ASP.NET Core and Node.js with REST and SOAP APIs and SQL Server. Owns end-to-end payment and fraud-prevention flows (resolved 85% of payment-related incidents), rescued a stalled banking integration to production, and mentors interns and junior developers in Agile teams.

CORE SKILLS

Languages: TypeScript, JavaScript, C#, Java, SQL, HTML5, CSS3

Front-End: React, Next.js, Angular, Tailwind CSS, SCSS, Bootstrap

Back-End: ASP.NET Core / .NET, Node.js, Express, REST, SOAP, Entity Framework, LINQ, Keycloak, Kafka

Databases: SQL Server, MySQL, Redis

DevOps & Cloud: Docker, Kubernetes, Jenkins, Azure DevOps, AWS, CI/CD (Continuous Integration/Continuous Delivery), Git, SVN

Testing & Practices: Jest, NUnit, OAuth 2.0 / OpenID Connect (OIDC), Agile/Scrum, OOP, SOLID

PROFESSIONAL EXPERIENCE

Full-Stack Software Developer - Growmate (consultant at IRN)

Jun 2025 - Present | Lisbon, Portugal (Hybrid)

- Own end-to-end payment flows; engineered fraud-prevention and value-reconciliation safeguards that resolved 85% of payment-related incidents and improved platform security and stability by 30%, coordinating fixes across multiple teams.
- Led the platform's largest refactor (the step / service-step flow): replaced 65% of client-side /api/* calls with Next.js Server Components, standardizing data flow through shared components and cutting back-end call volume by 75%.
- Resolved 100+ urgent and critical issues across authentication, payments, accessibility and UI/UX through root-cause analysis and debugging of C#/ASP.NET services and React front ends.
- Integrated Keycloak (OAuth 2.0 / OpenID Connect) with Chave Movel Digital (CMD, Portugal's government digital ID) and a payment provider; designed a modular multi-step form-rendering engine in React 18/19 and Next.js.
- Re-architected delivery into a multi-containerized stack (Docker to Kubernetes with Jenkins CI/CD) with Kafka event streaming and Redis caching on a C#/.NET back end; write Jest tests and mentor interns and junior developers in an Agile/Scrum team.

Full-Stack Software Developer - Neotalent (consultant at VORTAL)

May 2024 - Jun 2025 | Lisbon, Portugal (Hybrid)

- Worked on Operations Team II, the escalation tier that resolves the real underlying defects (not first-line user unblocking): diagnosed, fixed and tested complex production incidents across C#/ASP.NET services and React on an enterprise e-tendering platform.
- Shipped full-stack features spanning SQL Server data access through to the React user interface.
- Built and optimized Azure DevOps CI/CD and refactored legacy modules for performance and maintainability.

Back-End Developer - VIA Consulting (clients: Millennium BCP, ActivoBanco, Ageas, SIBS)

Jan 2023 - May 2024 | Lisbon, Portugal (Remote)

- Single-handedly rescued a stalled, non-functional integration project: rebuilt the C#/Java service layer connecting Millennium BCP and Ageas (REST and SOAP) and delivered it to production, restoring a blocked banking-insurance data pipeline now live.
- Created and launched online pet insurance end-to-end for Millennium BCP, a product the bank previously lacked, integrating it into the existing MBCP mobile app architecture, now live for customers.
- Automated financial-file processing with Rundeck jobs, wrote NUnit tests, and managed releases through Git, SVN and Azure DevOps CI/CD.

Front-End Developer, Intern - Emvenci Business Services

Mar 2022 - Aug 2022 | Lisbon, Portugal

- Modernized a legacy user interface into a new Angular design system (Atomic Design) with TypeScript and SCSS, using AWS, Git and CI/CD.

Software Developer, Intern - Arquiconsult

Mar 2020 - Aug 2020 | Lisbon, Portugal

- Built a C#/ASP.NET Core back-office application (Entity Framework, Razor Pages), Xamarin-facing APIs and a Google Maps integration.

EDUCATION

CTeSP (Higher Professional Technical Course), Web & Mobile Application Development - ISTECS, Lisbon (2020 - 2022)

Technician in Management & Programming of Computer Systems - INETE, Lisbon (2017 - 2020). Final grade: 15/20.

LANGUAGES: Portuguese (Native) | English (C1, professional working proficiency)
