PROFESSIONAL SUMMARY

Full-stack software developer with 4+ years building and shipping scalable web applications for banking, insurance, public-sector and enterprise clients. Works end to end — React, Next.js, Angular and TypeScript on the front end; C#/.NET, ASP.NET Core and Node.js with REST/SOAP APIs and SQL Server on the back end. **Took sole ownership of a stalled banking integration and delivered it to production, owns payment and fraud-prevention flows, and mentors junior developers.** Comfortable with Docker, Kubernetes, CI/CD (Azure DevOps, Jenkins), secure authentication (Keycloak, OAuth 2.0 / OIDC) and automated testing (Jest, NUnit) in Agile/Scrum teams.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), C#, Java, SQL, HTML5, CSS3

Front-End: React, Next.js, Angular, Tailwind CSS, SCSS/Sass, Bootstrap, responsive UI, design systems, state management

Back-End: ASP.NET Core / .NET, Node.js, Express, REST APIs, SOAP, Entity Framework, LINQ, Keycloak (OAuth 2.0 / OIDC), Kafka

Databases: SQL Server, MySQL, Redis

DevOps & Cloud: Docker, Kubernetes, Jenkins, Azure DevOps, AWS, CI/CD, Git, SVN, Rundeck

Testing & Practices: Jest, NUnit, unit & functional testing, Agile/Scrum, OOP & SOLID, clean code, performance optimization

PROFESSIONAL EXPERIENCE

Full-Stack Developer • Growmate (consultant at IRN)

Lisbon, Portugal (Hybrid) | Jun 2025 – Present

- Own the platform's payment flows end to end; engineered fraud-prevention and value-reconciliation safeguards that catch misaligned amounts before they reach customers, coordinating across multiple teams to resolve discrepancies.
- Designed and extended a modular, multi-step form-rendering engine in React 18/19 and Next.js for complex enterprise workflows on a high-traffic public-sector platform.
- Integrated Keycloak (OAuth 2.0 / OIDC) authentication wired to Portugal's Chave Móvel Digital (CMD) government identity, plus a payment-provider integration.
- Built secure REST APIs with Kafka event streaming and Redis caching across the C#/.NET back end, React/Next.js front end and database layer; hardened public submissions with mosparo bot protection under load/stress testing.
- Helped modernise the delivery pipeline — moved the app from Docker to Kubernetes with Jenkins CI/CD for repeatable deployments — and wrote unit/component tests with Jest in an Agile/Scrum workflow.
- Mentor interns and junior developers; use AI-assisted development (Claude) for scaffolding, test generation and faster debugging.

Full-Stack Developer • Neotalent (consultant at VORTAL - Operations Team II)

Lisbon, Portugal (Hybrid) | May 2024 – Jun 2025

- On Operations Team II (the escalation tier that fixes the real underlying defects, not first-line user unblocking), resolved 100+ urgent and critical issues across authentication, payments, accessibility and UI/UX through root-cause analysis and debugging of C#/ASP.NET services and React front ends, minimising downtime on a high-availability public-procurement platform.
- Delivered and maintained full-stack features end to end — from SQL Server data access to React UI — on VORTAL's enterprise e-tendering platform.
- Built and optimised CI/CD pipelines in Azure DevOps for reliable, repeatable deployments.
- Refactored legacy modules to improve performance, maintainability and scalability in an Agile team.

Back-End Developer • VIA Consulting (clients: Millennium BCP, ActivoBanco, Ageas Seguros, SIBS)

Lisbon, Portugal (Remote) | Jan 2023 – May 2024

- Single-handedly rescued a stalled, non-functional integration project — rebuilt the C#/Java service layer connecting Millennium BCP and Ageas (REST + SOAP) and delivered it to production, restoring a blocked banking–insurance data pipeline that now runs live.
- Built and shipped online pet insurance end to end for Millennium BCP — a product the bank previously did not offer — integrating it into the existing MBCP mobile app architecture, now live for customers.
- Designed and built REST APIs in C# and Java to integrate partner systems, including a Millennium BCP service bridging to Ageas over SOAP.
- Automated detection and processing of financial files (movements, transfers) with Rundeck jobs, persisting to MySQL / SQL Server.
- Contributed to a virtual-wallet solution for Medis; wrote unit and functional tests (NUnit) and managed delivery with Git, SVN and Azure DevOps CI/CD.

Front-End Developer, Intern • Emvenci Business Services

Lisbon, Portugal | Mar 2022 – Aug 2022

- Modernised a legacy platform UI into a new Angular design system built on Atomic Design principles for reusable, consistent components.
- Fixed bugs and improved front-end maintainability and scalability through a structured component architecture, working with TypeScript, SCSS and AWS in a Git + CI/CD workflow.

Software Developer, Intern • Arquiconsult

Odivelas, Lisbon, Portugal | Mar 2020 – Aug 2020

- Built a back-office application with C#, ASP.NET Core and Entity Framework, including Razor Pages UI.
- Developed APIs consumed by a Xamarin mobile client and integrated the Google Maps API (jQuery) to map parks and trees, persisting to SQL Server.

EDUCATION

CTeSP — Web & Mobile Application Development • ISTECS, Lisbon | 2020 – 2022

Technician in Management & Programming of Computer Systems (EQF Level 4, final grade 15/20) • INETEC, Lisbon | 2017 – 2020

LANGUAGES

Portuguese (Native) • English (C1 — Professional working proficiency)
